

## Applying TreVista Dimensional Graphics

Properly applying the graphic is the first step to ensure your brand performs as intended – to form a lasting impression on your customers.

By following these basic instructions, you'll save time and energy during the application. Keep in mind our graphics are permanent and not repositionable. Please read through the instructions carefully before applying.

### 1 Prep the Surface

#### Apply to a clean, dry surface at room temperature.

For best results, we recommend:

- Wiping the surface with an Isopropyl Alcohol wipe and lint-free cloth.
- Both the housing and the decal should be at or near room temperature (If the housing is still not completely cooled or dry, the adhesive will not stick to the surface).

### 2 Place the Graphic

#### Set the graphic in place.

- You can hold it in place by using masking tape across the top.
- Peel the liner off the backside of the decal slowly from the top down.

### 3 Secure the Decal

#### Apply pressure to secure adhesive.

- Evenly, across the entire graphic and edges, apply pressure using your hand or rubber roller as you remove the liner.
- We recommend Speedball™ Roller Applicator sold by US Cutter - [www.uscutter.com](http://www.uscutter.com).

### 4 Mask Removal

#### Almost done!

- First, remove the masking tape.
- Secondly, remove the protective mask used to hold the letters in place. At a 135° angle, pull the mask back on itself with a steady, firm pull.
- Enjoy your new TreVista Graphic!
